

**ABSTRACT OF THE INVENTION**

The present invention relates to a method for reducing symptoms related to stroke, this therapy comprising the administration of a therapeutically effective amount of at least two compounds selected from the group of an inhibitor of microglial activation, an antiglutaminergic agent and a voltage gated calcium channel blocker to a patient suffering from a neurodegenerative disease. The present invention also relates to a composition for reducing symptoms related to stroke, comprising a therapeutically effective amount of at least two compounds selected from the group of an inhibitor of microglial activation, an antiglutaminergic agent and a voltage gated calcium channel blocker in association with a pharmaceutically acceptable carrier.
